Quality Policy

Brovex is a mechanical engineering company which provides services in many forms of CNC machining, grinding, assembly and advanced measuring techniques. We manufacture everything from individual parts to complete products.

Through extensive collaboration with our sister company 'Unimet' in Serbia, we can offer our customers high-quality mass production at very reasonable costs.

At our workshop in Spånga we produce prototypes, pilot series, fast job and mini-series production runs.

Brovex's overall quality goal is to meet or preferably exceed our customer's expectations. We shall work so that every task that we perform shows and reflects our company's positive attitude towards our customer's needs. We believe that quality should be the basis for long-term relationships. Our management system shall be practiced in all functions and activities throughout the company so as to be used as an active tool in efforts to continually achieve improved and more efficient processes.

This is to be done with our customer's satisfaction always in mind and at the centre of our goals.

Our quality objectives used to meet our customer's expectations are essentially to:

- Deliver the desired product at the time agreed upon for the right price.
- Minimize all forms of errors or mistakes during our processes.
- Strive for employee well-being and the
- The improvement of skills through development.
- We adhere to all governmental laws and requirements in respect to Health, Safety and the environment.

And finally, to set targets to be achieved through competent and motivated employees who strive for quality and perfection. Through these standards we engage our suppliers, this promotes a high level of quality in our working relationship.
